

1051 P is a solvent-based, pigmented stamping ink which dries slightly faster than 382 E2 P.

Properties:

It covers extremely well, is also colour fast and provides resilient prints after drying. The silver-coloured prints are extremely uniform with sharp edges and a covering intensity far exceeding that of most white-pigmented stamping inks. 1051P is particularly suitable for use on dark-coloured materials because of the high colour contrast.

Application:

We recommend 1051 P for marking dark background rubber as well as for metals, various plastics, textiles and untreated wood. The binding agent ensures that this silver pigmented stamping ink does not leave a sticky impression even a short time after stamping.

Drying time:

~3min (metal)

Viscosity:

low viscosity, ~25sec
(Ford 4mm cup)

Stamp material:

Rubber, metal or special photo polymers

Stamp pad material:

We recommend only felt plate pads for 1051 P. In the case of automatic stamping machines, systems with an ink reservoir are preferable.

Thinner/cleaner:

Thinner 415

Available standard sizes:

50ml/g · 250ml/g · 1000ml/g
